

## THE CLARION.

HOUSE, FARM AND GARDEN

## For the Household.

For macaroni with cheese, or for Welsh rarebit, cheese which is too dry for the table may be used; when it is grated and melted, if it seems at all stiff, add a very little cream to moisten it.

Ink stains can be removed from marble by the use of a few drops of axalic acid diluted in spirits of wine. When they disappear, the surface of the marble should be well washed in soap and water.

**COOKIES.**—Take one heaping cup of sugar, twelve tablespoonfuls of melted butter, six tablespoonfuls of hot water and one teaspoonful of soda. Mix quickly, with flour enough to roll; roll thin and bake in a quick oven on well greased tins; keep in a stone jar.

Curtains are draped much higher than they used to be. It is no longer considered essential that they shall meet low down, but it is good form to tie them back so that one may look out of the window, or so that a small table may be placed close to the window.

After the dust has been thoroughly beaten out of carpets and they are tacked down again, they can be brightened very much by scattering cornmeal mixed with coarse salt over them, and then sweeping it all off. Mix the salt and meal in equal proportions.

Linen lunch-cloths one yard square with a vine and some odd and mirth provoking design in the corners, are the fancy of the hour. These are very pretty to cover the small tables used at lunch or small tea parties. Have as much variety in coloring and in the design as possible and yet be in harmony.

An excellent authority in medicine recommends a little common sugar as a remedy for a dry, hacking cough, and gives scientific reasons for it. If troubled at night or on first waking in the morning, have a little cup on a stand close by the bed, and take half a teaspoonful; this will be of benefit when cough syrups fail.

Economical housewives may be reminded that the last remnant of a ham and the last pieces of cheese can be used if they are grated finely. Grated cheese is useful in many ways and is, besides, appetizing on bread and butter. Omelets made with grated ham are very nice, and are also excellent for sandwiches, making a capital luncheon for school-girls.

A lemon-cream pie may be baked with two crusts. To one glass or cup of milk allow one tablespoonful of corn-starch, the yolks of three eggs, one cup of sugar, the juice and grated rind of a lemon, or, after grating the lemon peel, chop the rest of the lemon quite fine; the whites of the eggs should be beaten stiff and added to the rest just before putting it in the oven.

**BOILED BACON AND CABBAGE.**—Put a piece of bacon in a pot capable of containing two gallons; let it boil up, and skim it well; then put in some well washed, split cabbages a few carrots and parsnips also split and a few peppercorns; when the whole has boiled gently for about an hour and a half, throw in a dozen peeled potatoes, and by the time that these are done the dinner will be ready. And this is the way to make the most of this excellent and economical dinner.

The flavor of coffee may be greatly improved and its delicate aroma increased by adding a little bicarbonate of soda to the water with which it is made. This is the reason why the coffee obtained at Vichy, Carlsruhe, and other German watering places is of such superior excellence, the water in these localities containing a certain percentage of soda. In England many persons habitually use carbonate of soda in making tea, a pinch to a pint of water being the regular quantity.

## A Farmer's Soft Snap.

Warrenton Virginian.] Information has reached this place that a rooster belonging to a farmer near Thoroughfare Gap has gone off to live with a flock of wild turkeys. Every morning at daybreak he crows and the farmer, who knows where his rooster is, is thus enabled to go out and kill a wild turkey every day.

An improved cotton chopper has been patented by Mr. Greene W. Dugger, of Greensborough, Ala. This invention consists of an improved chopping and hoeing or cultivating machine, in which it is sought to provide simple and efficient means for regulating and adjusting the chopper and hoes or plows, both for working together or separately, also to provide for the protection of the same from injury by obstruction.

You will be sure of pure, rich blood and good health and strength if you use Parker's Ginger Tonic.

## Keep the Meal at Home.

Dr. Hilgard was formerly Professor of Chemistry at the University of Mississippi and Geologist of that State. He is now, we think, Professor of Chemistry at the University of California, and had charge of the Chemical department of the last census. He probably knows as much or more about agricultural chemistry than any scientist now engaged with the subject. In discussing the question of cotton seed vs. cotton seed meal, Dr. Hilgard says, against the use of the former:

1. The furze and hull constitute very serious obstacles to the access, both of the moisture, which promotes decay, and of the rootlets seeking nourishment. It thus happens that when the seed is used in such a manner, that sprouting fails to remove these obstacles. It may lie in the soil for twelve months with little or no change; we shall find the hull almost intact, with a black, shrunken kernel inside inclosing all the ingredients, safe from the demands of the growing crop. All that it does the first season is to stimulate the soil by gas formed in fermentation, while the most important portion has lain idle and failed to bear its own interest. This evil is enhanced by—

2. The oiliness of the seed, which materially obstructs decay; the kernel being as it were, "put up in oil," like sardines or olives, inside its hull.

As to the cotton seed he says: It is not enough that the soil ingredients be "present," they must be in the proper condition, and put in the right place. Manure, to be profitable, must have its ingredients readily available, and must be capable of being readily mixed with the soil around and beneath the plant. The former condition requires rapid and complete decay, the latter a powdery or granulated form. Both are most advantageously fulfilled in oil cake meal, which contains substantially all the soil ingredients of the seed from which it is made, except the small amount contained in the hull and furze. The oil carries with it traces only of the soil ingredients, and its absence is an advantage, in so far that decay takes place more readily and completely; for it must be understood that the decayed vegetable or animal matter is not as available as nutriment to plants. It will probably not be a great while before the Southern cotton grower will regard his cotton seed as a money crop, and will sell his cotton seed to the mill as regularly as he sells his cotton to the broker. In the light of this probability it cannot be too strongly urged on the planter to buy the meal back and keep it at home.

## Farm Notes.

The female moths of the canker worm cannot fly, but as they hatch out in warm days at the beginning of spring, they crawl up the bodies of apple trees and deposit their eggs. Hence it is of no use setting traps for them to fly into; but a band around a tree filled with tar or printers ink will stop their progress, and with some watchfulness they may be easily destroyed.

Fence corners with their mass of brush and weeds afford secure retreat for such troublesome insects as live through the winter, and for the deposit of eggs of others ready to hatch in spring the larvae prepared to engage in depredations upon the first plants that appear. Fire puts an end to most of these, and thus the destroying element lessens the labor and saves the crops of farms.

A cheap black paint or varnish for iron work is prepared as follows: clear solid wood tar, 10 pounds; lamp black or mineral black, 1½ quarts. The tar is first heated in a large iron pot to boiling, or nearly so, and the heat continued for about four hours. The pot is then moved from the fire out of doors, and while still warm (not hot) the turpentine mixed with the black is stirred in. If the varnish is to be thick to dry quickly, add more turpentine. Benzine can be used instead of turpentine but the results are not so good. Asphaltum is preferable, to cheap tar.

A NOVEL device for stopping runaway horses, has been patented. The invention consists in so arranging a curtain or blinder to the bridle that it may be dropped over the horse's eyes should he become unmanageable thus cutting off the light and reducing him to submission. When the animal is once more under control, the curtain may be raised again without subjecting the driver to alight from his vehicle. —Scientific American.

## Prevent Decay of the Teeth.

With their surest preservative, aromatic SODIUM. Whiteness of the dental row, a healthful resilience and hardness of the gums, a sweet breath, an agreeable taste in the mouth, all these are conferred by SODIUM. Does not such an invaluable toilet article, one so pure as well as effective, deserve the popularity it enjoys? Most assuredly. It has no rival worthy of the name. The ordinary powders and pastes are nothing to it, and since its appearance have rapidly lost ground. Sold by druggists.

Yes, my son, the gentlemen whom you see pinned up against the entrance of the theatre are the managers. They have charge of the front of the house.

## Planting the Pear Orchard.

A practical grower gives his experience in pear culture in the American Agriculturist for May:

Many trees that fail to grow have been planted by careless or inefficient persons, and to this cause can be attributed the death of most of the trees which fail after they are set out in the orchard. The first step is to have the land laid off with a two-horse plow into good sized furrows (returning in the same furrow to clean it out and widen it), twenty feet for standards, and fifteen feet for dwarfs. When this has been done, with a light one-horse plow, draw shallow cross-furrows the same distance apart. As soon as the marks are made, commence the planting. Before the trees are taken to the field, have all bruised and broken roots and limbs carefully pruned with a sharp knife. Put the trees into a cart, wagon, or barrow, and cover them up with bagging as the high winds dry them even more than does the sunshine. In the middle of the field, where it will be equally convenient to all parts of the ground, have the trees hauled, and also provide a tub or half barrel, filled with thick mud. Just before planting, immerse the roots of each tree in this mud, which will assist in insuring the growth of the trees, causing the surrounding earth to adhere to the roots. By adopting this means we have lost less than one per cent. of the large numbers of pear trees we have planted.

The boys of New York must be very bad, for they need a great deal of protection. There is now a law prohibiting the sale of liquor to them, another prohibiting the sale of dangerous weapons, and now comes a committee of the Legislature of that State with a bill which provides a severe penalty to any person who shall loan, sell or give to any minor under 16 years of age any dime novel or work of fiction without first obtaining the written consent of his parent or guardian.

The aim of this bill is proper enough. The boys of New York read a class of books and papers filled with the wildest and most impossible stories of Indians, burglars or prize fighters. It would, perhaps, be a very instructive and interesting investigation to submit to the youth of New York the question—What profession they desired and intended to follow? Nearly all would answer—Indian scout or pirate; and the remainder would certainly declare their preference for the now gentlemanly profession of bank robber and prize fighter.

That the youth of the metropolis, and of all the country, is being corrupted by the literature provided for them cannot be denied. Scarcely a day passes but a gang of boys, from 10 to 15 years of age, are captured on some train a few miles from New York, with a considerable sum of money, stolen from their parents, en route to the West to scalp the redskins, and two large organizations were unearthed last winter, regularly organized gangs of amateur burglars, among a lot of toddling youngsters, with bad oaths, pass-words, and all the paraphernalia of the burglar of literature.

## Short-Hand Talking.

Among the common errors in the use of language are these: The mispronouncing of unaccented syllables, as terrible, for terrible; the omission of a letter or short syllable, as point forgoing, and every for every; and the running of words together without giving to every one a separate and distinct pronunciation.

I know a boy who says, "Don't want'er," when he means "I don't want to." "Whajer say?" when he means "What did you say?" and "Where de go?" instead of "Where did he go?" Sometimes he hear "flood" instead of "if I could," "wilfercan" instead of "I will if I can," and "howjerknow?" for "how do you know?"

And have you never heard "m—m" instead of "yes" and "ni—ni" instead of "no?"

Let me give you a short conversation I overheard the other day between two pupils of our High School, and see if you never heard anything similar to it: "Harejergo lasnight?" "Hadder skate?" "Jerfind three hard'n'good?" "Yes; hard'n'good?" "Jer goerlong?" "No; Bill'n Joe wenterlong." "Howlate jerstay?" "Pastate."

"Lemmeknow when yergoagin, woncher? I wattergo'n'showyer howter-skate." "H—m, ficedad'n skate better'n you I'd sellout'nquit." "Wel, we'll tryerace 'n seefyerace." Here they took different streets, and their conversation ceased. These boys write their compositions grammatically, and might use good language and speak it distinctly if they would try. But they have got into this careless way of speaking and make no effort to get out of it.—Christian at Work.

The most reliable agent for destroying and expelling worms from children and adults is Shiner's Indian Vermifuge, 25 cents a bottle. Try it. Every bottle guaranteed to give satisfaction.

WESSON HERALD: "We now make the prediction that Tilden will be the next President of the United States. He is our choice, first, last and always. We want a man, who knowing his duty will dare to do it."

## The Boy Had Pony on the Brain.

"Pa, I wish you would buy me a pony," said little Johnny Green.

"I have no money to buy you a pony, my son. Be a good boy; go to school and work hard, and some day you will have money to buy ponies with."

"You buy lots of ponies for yourself, pa and I think you ought to buy me one."

"How do you know that I buy ponies, sir?"

"Cause ma said you did, and she told the preacher that they made your head swim like butter on a hot griddle—Chicago Eye."

BAILEY'S SALINE APERIENT is a white powder, and when placed in water foams, sparkles, and tastes just like soda water. It is very cooling and pleasant, acting gently upon the bowels, relieving constipation, curing sick headache, sour stomach and heartburn.

ENGLISH FEMALE BITTERS sends red blood to a sickly woman's cheeks and strength to her muscles, by giving an appetite, aiding digestion and building up the system. All sickly women will be delighted with its prompt and reliable action.

## "Tough on Chills."

Cures 5 cases for 25 cents in cash or stamps. Mailed by John Parham, Atlanta, Ga.
